## Errata

### 2024 Edition

#### **Update to Suprapubic Catheters**

An update has been made to Chapter 11 Urinary System, Suprapubic Catheters, Page 310. The imaging guidance code for an aspiration of the bladder with insertion of a suprapubic catheter has been updated. This update can be seen below in red.

“Simple replacement of a cystostomy catheter should be reported with code 51705, while a complicated cystostomy tube change is coded as 51710. If imaging guidance is performed and documented, code **75984** should also be reported. Like other catheter replacements, if the exchange is performed via the existing tract, it is coded as a catheter change. If a new catheter or tube is inserted via a new tract, it is coded as an insertion.”
